Documents 1 and 2 set forth novolac phenol resins wherein the total quantity of phenol monomer and phenol dimer contained does not exceed 10%, and the variance ratio (M_w/M_n) of weight average molecular weight (M_w) and number average molecular weight (M_n) falls within the range of 1.1 to 3.0. However, none of the documents cited in the international search report indicates that an inorganic filler is prepared by combining 300 to 800 parts by mass of wallastonite and 100 to 200 parts by

weight of glass fiber with respect to 100 parts by weight of novolac phenol resin, and said feature would not be obvious to a person skilled in the art.

In addition, blending the specific inorganic filler offers the invention of this application the effect that a molding material can be obtained with outstanding thermal shock resistance, hot water resistance and wear resistance.

Therefore the inventions set forth in claims 1 to 4 are novel and involve an inventive step.
